Dactylococcus Bibrayanus on small Copepoda
(Cyclops) near Erlangen; common, abundant in the
Hydrant water of Boston; also 5–15 ♀ ♀ in each liter
of water (20–60 in each Gallon) covered with the Alga
or at other times free from it. The water comes
from Cochituate pond, 40 miles from Boston.

Dactylococcus Bibrayanus
perfect state with
4 daughter cells.

15. *P. Pyrenaica*, Lapeyr. fide Parlatore, *P. Bruttia* Ten. and with other synonyms, not to be confounded with that other *P. Pyrenaica* which is a form of *P. Laricio*. This species is so closely allied to the last that it is often considered a variety of it. But the leaves are stouter, the more numerous ducts are surrounded by strengthening cells, which is very rare in the leaves of the other; in both these cells are found near the vessels; the male flowers are twice as large, but the outer pair of involucral bracts is almost equal to the inner ones; the cones are (thicker nearly sessile and) generally several together, and often lateral and terminal on the same tree (see pag —); the clustered cones in Tenore's typical specimen in the botanic Garden of Naples are the result of disease.

16. *P. leiophylla*, Schiede & Deppe has often 6 and even 7 leaves; the ducts are very small and often wanting; the strengthening cells usually well developed in bundles under the epidermis, are, as

Rhondendron jinipersinum — fl. — July, E. L Green

Liquid to prepare Picea &c & keep from dropping the leaves: 1. Glycerin 2. Water and some Carbolic Acid., 1-2 hours immersion is sufficient; if longer immersed the leaves hold faster but change colour Prof E. Parkinje
